

Environmental Health Workshop

with

Dr George Carlo

Saturday 5th January 2013

09.00 - 12.30 hrs

Friends' House,

173 Euston Road, London NW1 2BJ

T: 020 7663 1094/95

Continuing Professional Education Workshop for Doctors, Health Care
Practitioners and Environmental Health Scientists

Subject Matter:

Our active laboratories range from studies of those with conditions such as Electro-hypersensitivity, multiple chemical sensitivities and Autism to peak performers in high-level amateur and professional athletics. Combining data across this continuum has given us unique insights into the mechanisms underlying causation, successful intervention, effective prevention and peak functionality. For example, we have learned that in all cases, the primary foundations underlying healthful adaptation include:

Sustained metabolic and energetic balance

Control and management of cognitive and non-cognitive systemic stressors, and biological facilitation of increased adaptive capacity from these and similar findings, we have developed science-based protocols that specifically address each of the key foundational components for long-term health, wellness and a happy, prosperous life.

This workshop is intended to:

Present the science encompassed within our new findings

Expand our network of practitioners and scientists able to apply, modify and share protocols that are working

Make these protocols available to more of those who would benefit from them.

Tickets cost £60; TO RESERVE YOUR PLACE please

access: <http://www.healthfuladaptationdispensary.com/european-events-2013/>
click on selected UK based event.

You will be issued a ticket to qualify for entry on the day, please bring this ticket with you.
