

50% increase in frontal and temporal lobe tumors in children between 1999 and 2009

ME Supreme Court Oral Arguments in Smart Meter Case 5.10.12

Dear Concerned Customers,

Below is the link to hear the oral arguments that took place May 10th in the smart meter case before the Maine Supreme Court. Listen to the Justices tell PUC/CMP that they ducked their duty to investigate the customers adverse health concerns, trespass, constitutional and privacy issues! Still waiting for the written order to see exactly what the Supreme will do about it.

Robert

UK statistics: 50% increase in frontal and temporal lobe tumors in children between 1999 and 2009!!!

How much evidence do we need and how many lives will be destroyed before governments have the courage to do their job and protect public health and industry finds a way to make devices safer so that they are not killing their customers?

Check out this link regarding cellphones and brain tumors.

http://www.newsmaxhealth.com/headline_health/cellphones_health_damage/2012/05/06/449222.html?s=al&promo_code=ED62-1

Figures just published by the U.K.'s Office of National Statistics found a 50 percent increase in frontal and temporal lobe tumors in children between

1999 and 2009.

Cell Tower Stocks Beware: PBS Frontline Explores 'Cell Tower Deaths'

PBS asserts that tower climbers who install and service antennas are about 10x more likely than the average construction worker to die on the job.

Gael Prevostis selected for the olympic games in London.

Radio France Internationale www.rfi.fr

May 21, 2012 - 6:13 p.m.

Archery: between arrows and readings with candlelight, a style of life by a gifted archer

AFP - Because his family is **electrosensitive**, Gael Prevost grew up in an isolated farm in Forez, lit by candles and heated over a wood fire, with a great passion for the archery, he is at 18, one of the great French hopes.

The vice-world champion team, looking with his two teammates European title this week in Amsterdam, is not easily reachable. In his own world, mobile phone, computer, tablet computers and other objects are parasites.

"I am not bothered because I have none. As I have never had a laptop, I do not feel a lack. If I want one? Absolutely not," he says. "I used a phone just once or twice when there is a call to a journalist. My coach handed it to me, but never beyond that!"

This tall young man of 1m96, which looks good in all respects, understands a little **out of place in this digital age**. Just did an email address and a Facebook account, and agreeing to share small portions of video games with his colleagues.

"Playing in a group can be fun, but I have to play alone in my room, I do not see the point," said he. In his spare time, between 400 arrows shot his daily training, he prefers to attack the great adventure novels of literature, music, or simply walk.

After the European Championships, he will relax with his parents, in this "little piece of Forez clueless" where tranquility is assured. The village is so isolated that he and his siblings attended school at home.

He likes the "special atmosphere" that emerges from this family home, where candles and oil lamps used to light up and fires to keep warm. Electricity is used only for the needs of the pig that carries his father.

This lifestyle has become when his parents made the link between electrical and insomnia and headaches they suffered. "Since we have eliminated the TV remote and electricity as possible from home, they have more headaches and sleep very well," said Gael Prevost. "My sister is also very sensitive when there is wifi in a building or a laptop turned on her side. But me, that I never bothered."

Of this education, the young man fired a behavior posed, in line with his discipline: "The archery is a sport where one has much to know yourself. It is important to create a bubble of calm around and drop more or less everything that is happening around. "

He was 6 years old when he discovered archery for fun first, then later in the club. At 13, he joined the center of Bordeaux and includes Insep two years later. This lifestyle quiet did not prevent him from rush: bachelor at 16 and already vice-world champion team in 17 years.

"Gael is intriguing because he is timeless, atypical, notes Anne Reculet, the captain of France. But he is also surprising in performance. On that one as intellectually, he is far from being late. "

Smart Meter Harm

If you have been injured by the radiation emissions from Smart Meters (aka AMR or AMI electric, gas, or water utility meters), or any other EMF or wireless device, please complain to the FDA! Click on the following link, download the form, and mail it to the FDA (address on the form).

<http://www.fda.gov/downloads/AboutFDA/ReportsManualsForms/Forms/UCM236066.pdf>

Let's get the FDA to investigate Smart Meters and other EMF hazards.

Thank you.

Sooke to radiate kids

Sooke School District is rolling out commercial Wi-Fi networks in ALL its schools, as most school districts across BC, without consulting parents first nor providing any disclosure of the potential health impacts associated with long term, cumulative exposure to microwave radiation. In today's classrooms, a multitude of wireless devices all emitting pulsed radiation will expose children at close proximity for 6 hours a day, 5 days a week. What will that mean to a little boy or girl after 12 years or more of exposure?

Public health experts from the WHO, IARC, EEA, and the AAEM to list a few health agencies are advising children reduce their exposure to microwave, radio frequency radiation, not significantly increase it on a daily basis! Without full disclosure there is no informed parental consent to expose people's children all day while at school to a 2b carcinogen !! Tragically it may take a class action lawsuit before children's rights to a safe learning environment are adhered to. The internet can be obtained with much safer, faster, and more secure hard wired connections that many schools already have in place. Convenience surely should never override the safety of children and yet that is exactly what is happening.

Please do your part to help grow awareness of the dangers of Wi-Fi technology. Share this PDF document with its numerous links to every relative/friend/neighbour/co worker with children you know.

Thanks so much.

Tammy Jeske
Parent advocate for safe technology in schools
www.citizensforsafetechnology.org

Parents must demand:

- 1) Health and safety hearings with the School Board
- 2) Full Disclosure of potential risks of chronic microwave, radio frequency radiation exposure for children
- 3) Informed Parental Consent (2b carcinogen) before allowing WiFi technology in schools
- 4) Some schools in each district at a minimum must be free of indoor Wi-Fi

emissions, using only hard wired communications within the building.

BCCPAC Resolution, Vote May 26, 2012: Parent Choice Regarding Exposure to EMF Emissions from Wi-Fi (pg. 22/30)

This is your reference number: 578691

Dear CRTC representative,

I would like to have a program that has been accepted to be shown by our local Shaw network in Victoria, to be shown in other local Shaw stations throughout British Columbia. The subject matter is regarding our public utility BC Hydro and the information and opinions within this program pertains to all users of electricity in this province.

Question: Are there CRTC regulations governing the Shaw cable network that pertain directly to this issue? Also what is the CRTC's interpretation of these regulations when applied to this specific matter?

Best Regards
